

New HIV infections (including AIDS cases), 2019-2020

Upstate Public Health Region includes eleven counties: Abbeville, Anderson, Cherokee, Greenville, Greenwood, Laurens, McCormick, Oconee, Pickens, Spartanburg, and Union.

HIV in the Upstate Public Health Region (PHR) For the two-year period 2019-2020, 350 people were newly diagnosed with HIV. This represents 23 percent of the total cases diagnosed in South Carolina.

By gender, 79 percent of new HIV/AIDS cases occur among men; 21 percent were among women.

By age, the majority of new HIV/AIDS cases were among people ages 20-29 (37 percent), 23 percent were among people age 30-39, 17 percent were among people age 40-49, and 17 percent were age 50 and up. Six percent of new cases were under the age of 20.

By risk, among the 216 people who reported a risk, men who have sex with men (MSM) represent the largest proportion of recent infections (85 percent), followed by those indicating heterosexual sex as their exposure to HIV (5 percent); seven percent reported Injection drug use (IDU); and three percent were the combined risk of MSM and IDU.

By race/ethnicity, among people newly diagnosed with HIV/AIDS in the Upstate PHR, 57 percent were African American; 31 percent were white; and nine percent were Hispanic. In 2019-2020, African Americans had a case rate 7.7 times greater than whites in the Upstate PHR.

Among women recently diagnosed with HIV/AIDS in the Upstate PHR, most were African American (62 percent); 26 percent were White; and 5 percent were Hispanic. Of the 13 women reporting risk, 62 percent indicated heterosexual sex as their exposure to HIV; 38 percent reported Injection drug use.

Among men recently diagnosed in the Upstate PHR, 54 percent were African American; 31 percent were white; and 10 percent were Hispanic. Of the 203 men reporting risk, 91 percent were men who have sex with men, one percent were exposed through heterosexual sex; five percent reported Injection drug use; and three percent were both MSM and IDU.

Total People Living with HIV/AIDS through December 2020

As of December 2020, there were 4,034 residents of the Upstate Public Health Region living with a diagnosis of HIV (including AIDS). This represents 21 percent of the S.C. total. Of these, 3,036 were men and 998 were women. Most people (1,991) were ages 50 and over; 770 were ages 40-49; 828 were ages 30-39; 411 were ages 20-29; and 34 were children and teens under 20 years of age.

As with new infections, African Americans are disproportionately impacted. Most of the people living with HIV in the Upstate Public Health Region were African American men (42 percent), 27 percent were White men, 17 percent were African American women and six percent were White women. Seven percent of people living with HIV were Hispanic/Latino (men & women).

Of the 3,237 people living with HIV who reported a risk, 64 percent reported a risk of men who have sex with men; followed by men and women exposed through heterosexual sex (23 percent); Injection drug use (seven percent); and the combined risk of men who have sex with men and Injection drug use (three percent).

S.C. HIV Prevention Program Priority Populations

Care, treatment and prevention services for persons living with HIV/AIDS are a top priority for the State of South Carolina's HIV Program.

Among remaining priority populations for HIV prevention services:		
S.C. HIV Prevention Program Priority Populations ^(1,2)	2019/2020 Diagnosed HIV/AIDS Cases by Population % of Total Cases w/Risks Identified (227 Total) *	People Living with HIV/AIDS, 2020 By Population % of Total Cases w/Risks Identified (3,309 Total)
2. African American MSM	46%	33%
3. African American WSM	2%	11%
4. African American MSW	1%	5%
5. White MSM	23%	23%
6. IDU	7%	7%
7. ♦Hispanic/Latino ³	14%	8%

***Caution: Due to small numbers, must interpret recent case proportions with caution.**

NOTES:

1. Populations: MSM = Men who have Sex with Men; IDU = Injection Drug User; WSM = Women who have Sex with Men; MSW = Men who have Sex with Women.
2. Priority Populations are a subset of the Epi Profile data and are not directly comparable to incidence and prevalence counts/percentages.
3. Ethnicity, in and of itself, is not a risk factor for HIV; however, in the context of Priority Populations, Hispanic/Latino is included as a 'Risk' for reporting purposes.
